

Let's investigate what could have led to the data breach!

Identify whether each statement is a True or False factor that could have contributed to the incident.

TRUE	FALSE
	

1. Inadequate Incident Response Plan:

The organization did not have a clear incident response plan in place, delaying their reaction to the data breach and allowing the situation to worsen

2. Phishing Attacks:

Employees fell victim to phishing emails that tricked them into providing their login credentials to attackers.

3. Data Redundancy Practices:

The organisation implemented data redundancy practices that ensured data was backed up, preventing loss of data in case of a breach.

4. Lack of Data Encryption:

Sensitive data was stored unencrypted, making it accessible to anyone who gained unauthorised access to the system

5. Physical Security Measures:

The organization had robust physical security measures in place, including surveillance and restricted access to sensitive areas.

Psst! Combine the numbers and first capital letters of the correct answers (true or false) to access the first cue.
